

harmonia

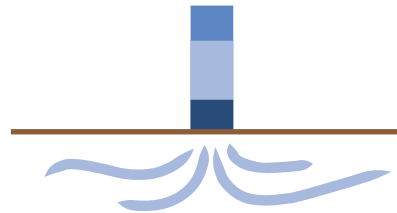

hello. let's make some harmony.

musical harmony

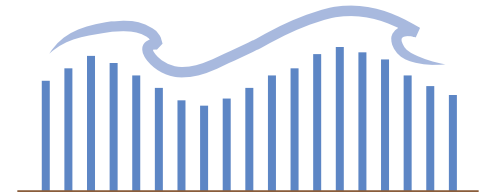

remember when you used to drag a stick along your neighbor's fence? well go ahead and **grab a stick!** *harmonia's* different heights and water levels can sound quite musical.

environmental harmony

what is the function of *harmonia*? there is sand and activated carbon inside each tube, providing **natural filtration for rainwater**. This water then absorbs into the soil, nurturing the surrounding environment without harming it.

aesthetic harmony

does the shape remind you of something? *harmonia's* unique wave pattern of clear glass tubing is **inspired by ocean waves**, emphasizing the intent to conserve and purify water.
